Dashboard Project – Employee Dataset

Using the Employee dataset, build an simple Excel dashboard that answers meaningful business questions about the workforce.

Requirements

- Create **7 calculated columns**.
- Create **7 measures** using DAX.
- Create **at least 3 KPI cards**.
- Create **at least 2 Pivot Tables**.
- Create **multiple Pivot Charts**.
- Add **Slicers** for interactivity.
- Add a **logo** and dashboard title.
- Organize all components on a single Dashboard sheet.

Employee Dataset

Available fields include:

- Employee Information
- Department
- Country
- Center
- Years of Service
- Monthly Salary
- Annual Salary
- Job Rate
- Sick Leaves
- Unpaid Leaves
- Overtime Hours

Instructions

Do not follow a predefined design.

As a data analyst, explore the dataset, identify useful business metrics, and decide:

- Which calculated columns should be created.
- Which measures provide meaningful insights.
- Which KPIs should be highlighted.
- Which Pivot Tables best summarize the data.
- Which charts best communicate the findings.
- Which slicers improve user interaction.

Your goal is to create a dashboard that helps management understand the workforce and support decision-making.
